

This issue we get to know Rusty Camille

1. What is your current role?

Exploration Geologist for Newmont Australia

2. What role has geophysics played in your career so far as a geologist?

Quite a lot to be honest. It has helped me and our exploration team develop new targets and vector to mineralisation especially in Kalgoorlie and the Tanami region. Also, assisting fellow geologists in understanding how to interpret the data and the value of geophysics and petrophysics in mineral exploration.

3. What do you like most about being a geophysicist?

Being out in the field, collecting geophysical data and making the most of the surreal Australian landscape.

4. Your most respected geophysicist?

Dr Mark Lackie

5. What's your most treasured textbook?

Geophysics for the Mineral Exploration Geologist by Mike Dentith and Stephen Mudge

6. What is the biggest challenge that you have had to overcome in your career?

Moving to Kalgoorlie, WA to live and work in mid 2015 just to get a start in the mining industry. Haven't looked back ever since!
